SUMMARY

Computer Science graduate and full-stack developer skilled in building scalable web applications with proficiency in Java, React.js, and core CS fundamentals. Seeking a Software Engineer role with expertise in designing and developing robust backend services.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), Java, TypeScript, C++, SQL, HTML, CSS
Frontend/Backend:	React.js, Next.js Node.js, Express.js, REST APIs, WebSocket
Databases & Infra/Auth:	MongoDB, Redis, Docker (Basics) JWT, bcrypt, RBAC
Dev Tools & Deployment:	Git, GitHub, Vercel, Netlify, Render
Core CS:	Data Structures & Algorithms, OOP, DBMS, System Design, Operating Systems
AI/LLM:	LangChain, RAG, AI Integration (OpenAI API)

EXPERIENCE

Freelance Full-Stack Developer

2025–Present | Self-Employed, Remote

- Designed and deployed full-stack management systems for two clients (a gym and a diagnostic center), from initial requirements through production launch.
- Built responsive, role-based web apps that digitized scheduling, client records, and daily operations, replacing manual processes.
- Owned the full development lifecycle — requirements, architecture, development, testing, and deployment — while handling client communication directly.

Virtual Internship — Thiranex (Full-Stack Development)

- Built a Task Management Application enabling task creation, assignment, and status tracking.
- Developed an E-Commerce Web Application with product browsing, cart, and order management.
- Created a Blog Platform with Comments, including content publishing and threaded discussions.

Software Engineering Job Simulation — Forage

- Completed a virtual job simulation performing realistic software engineering tasks for a Y Combinator-style startup application.
- Implemented frontend improvements from user feedback and shipped new backend features.
- Analyzed product/feature releases to evaluate user impact and guide development decisions.

PROJECTS

FlowForge — Real-Time Critical Path Orchestration Engine

[GitHub](#) | [Live Demo](#)

- Engineered a scalable real-time engine with a focus on system design and architecture, implementing algorithms from scratch and integrating with MongoDB for data persistence.
- Utilized Redis for real-time broadcasting and Socket.io/WebSocket for efficient communication, ensuring a robust and scalable backend service.
- Deployed the application on Render/Vercel, leveraging cloud services for a scalable infrastructure.

TrackChat — Real-Time Chat & Device Tracking App (In Progress)

MERN, Socket.io, WebSocket

- Designed an event-driven backend with Node.js/Express.js, focusing on scalability and real-time communication using Socket.io and WebSocket.
- Implemented a MongoDB-based data storage solution for message persistence and utilized JWT for authentication.
- Developed a mobile-first React.js frontend with a focus on user experience and interactive mapping using Leaflet.js.

Banking System — Full-Stack Banking Application

[GitHub](#) | [Live Demo](#)

- Architected a full-stack application with a React.js frontend and a RESTful Express.js/Node.js API, ensuring a scalable and maintainable codebase.
- Structured the codebase into independently deployable modules, allowing for efficient deployment and scaling.
- Deployed the application on Render and Vercel, utilizing cloud services for a scalable infrastructure.

EDUCATION

JIS University, Kolkata, India — B.Tech Computer Science and Engineering — Aug 2022 – May 2026

CERTIFICATIONS

Cisco Certified Network Associate — Collaboration (CCNA-C), Simplilearn — Jul 2024
Generative AI for Developers (Advanced), Google Skills — In Progress
