SUMMARY

Computer Science graduate and full-stack developer skilled in building scalable web applications with expertise in Java, React, and backend services. Proficient in designing and developing robust systems with core CS fundamentals (DSA, OOP, DBMS, System Design) and experience with MongoDB, seeking a Software Engineer role.

TECHNICAL SKILLS

Databases & Infra/Auth:	MongoDB, Redis, Docker (Basics) JWT, bcrypt, RBAC
Languages:	JavaScript (ES6+), TypeScript, C++, SQL, HTML, CSS
Frontend/Backend:	React.js, Next.js Node.js, Express.js, REST APIs, WebSocket
AI/LLM:	LangChain, RAG, AI Integration (OpenAI API)
Dev Tools & Deployment:	Git, GitHub, Vercel, Netlify, Render
Core CS:	Data Structures & Algorithms, OOP, DBMS, System Design, Operating Systems

EXPERIENCE

Freelance Full-Stack Developer

2025–Present | Self-Employed, Remote

- Designed and deployed full-stack management systems for two clients (a gym and a diagnostic center), from initial requirements through production launch.
- Built responsive, role-based web apps that digitized scheduling, client records, and daily operations, replacing manual processes.
- Owned the full development lifecycle — requirements, architecture, development, testing, and deployment — while handling client communication directly.

Virtual Internship — Thiranex (Full-Stack Development)

- Built a Task Management Application enabling task creation, assignment, and status tracking.
- Developed an E-Commerce Web Application with product browsing, cart, and order management.
- Created a Blog Platform with Comments, including content publishing and threaded discussions.

Software Engineering Job Simulation — Forage

- Completed a virtual job simulation performing realistic software engineering tasks for a Y Combinator–style startup application.
- Implemented frontend improvements from user feedback and shipped new backend features.
- Analyzed product/feature releases to evaluate user impact and guide development decisions.

PROJECTS

FlowForge — Real-Time Critical Path Orchestration Engine

[GitHub](#) | [Live Demo](#)

- Engineered a scalable real-time engine with MongoDB, implementing topological sort, DFS cycle detection, and CPM forward/backward-pass algorithms from scratch.
- Integrated LangChain and OpenAI API for AI-driven features and built a real-time layer with Socket.io/WebSocket, Express.js, and Redis.
- Deployed on Render/Vercel with MongoDB Atlas, ensuring a robust and scalable backend service.

TrackChat — Real-Time Chat & Device Tracking App (In Progress)

MERN, Socket.io, WebSocket

- Built a real-time chat app with live device-location tracking via Socket.io, WebSocket, and HTML5 Geolocation API, rendered on an interactive Leaflet.js map.
- Architecting an event-driven Node.js/Express.js backend with MongoDB for message persistence and read receipts.
- Implementing JWT refresh-token rotation with a mobile-first React.js frontend.

Banking System — Full-Stack Banking Application

[GitHub](#) | [Live Demo](#)

- Engineered a full-stack banking application (React.js frontend, RESTful Express.js/Node.js API) handling core banking operations such as accounts and transactions.
- Structured the codebase into independently deployable frontend/backend modules and deployed a unified pipeline: backend on Render, frontend on Vercel.
- Demonstrated expertise in designing and developing robust systems with core CS fundamentals.

EDUCATION

JIS University, Kolkata, India — B.Tech Computer Science and Engineering — Aug 2022 – May 2026

CERTIFICATIONS

Cisco Certified Network Associate — Collaboration (CCNA-C), Simplilearn — Jul 2024
Generative AI for Developers (Advanced), Google Skills — In Progress
