SUMMARY

Experienced full-stack developer with a strong background in UI/UX design development, visual design, and user experience. Skilled in building production-style MERN applications, real-time systems, and AI-integrated features with LangChain and RAG. Proficient in React.js, Node.js/Express.js, REST API design, and core CS fundamentals (DSA, OOP, DBMS, System Design). Seeking a Software Engineer / Full-Stack Developer role with a focus on creating complex data-heavy web applications and delivering great user experiences.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript, C++, SQL, HTML, CSS
Frontend/Backend:	React.js, Next.js Node.js, Express.js, REST APIs, WebSocket
UI/UX Design:	Responsive design with CSS/SCSS, cross-browser differences & flexbox
AI/LLM:	LangChain, RAG, AI Integration (OpenAI API)
Databases & Infra/Auth:	MongoDB, Redis, Docker (Basics) JWT, bcrypt, RBAC
Dev Tools & Deployment:	Git, GitHub, Vercel, Netlify, Render
Core CS:	Data Structures & Algorithms, OOP, DBMS, System Design, Operating Systems

EXPERIENCE

Freelance Full-Stack Developer

2025–Present | Self-Employed, Remote

- Designed and deployed full-stack management systems for two clients (a gym and a diagnostic center), from initial requirements through production launch.
- Built responsive, role-based web apps that digitized scheduling, client records, and daily operations, replacing manual processes.
- Owned the full development lifecycle — requirements, architecture, development, testing, and deployment — while handling client communication directly.

Virtual Internship — Thiranex (Full-Stack Development)

- Built a Task Management Application enabling task creation, assignment, and status tracking.
- Developed an E-Commerce Web Application with product browsing, cart, and order management.
- Created a Blog Platform with Comments, including content publishing and threaded discussions.

Software Engineering Job Simulation — Forge

- Completed a virtual job simulation performing realistic software engineering tasks for a Y Combinator–style startup application.
- Implemented frontend improvements from user feedback and shipped new backend features.
- Analyzed product/feature releases to evaluate user impact and guide development decisions.

PROJECTS

FlowForge — Real-Time Critical Path Orchestration Engine

[GitHub](#) | [Live Demo](#)

- Engineered a real-time CPM engine modeling projects as dependency graphs, implementing topological sort, DFS cycle detection, and CPM forward/backward-pass algorithms from scratch.
- Integrated LangChain and OpenAI API for AI-driven features: automated standup-brief generator and semantic dependency detector for hidden task relationships.
- Built a real-time layer with Socket.io/WebSocket, Express.js, Redis broadcasting graph updates within milliseconds; deployed on Render/Vercel with MongoDB Atlas.

TrackChat — Real-Time Chat & Device Tracking App (In Progress)

MERN, Socket.io, WebSocket

- Building a real-time chat app with live device-location tracking via Socket.io, WebSocket, and HTML5 Geolocation API, rendered on an interactive Leaflet.js map.
- Architecting an event-driven Node.js/Express.js backend with MongoDB for message persistence, read receipts, typing indicators, and group chat.
- Implementing JWT refresh-token rotation with a mobile-first React.js frontend.

Banking System — Full-Stack Banking Application

[GitHub](#) | [Live Demo](#)

- Engineered a full-stack banking application (React.js frontend, RESTful Express.js/Node.js API) handling core banking operations such as accounts and transactions.
- Structured the codebase into independently deployable frontend/backend modules.
- Deployed a unified pipeline: backend on Render, frontend on Vercel.

EDUCATION

JIS University, Kolkata, India — B.Tech Computer Science and Engineering — Aug 2022 – May 2026

CERTIFICATIONS

Cisco Certified Network Associate — Collaboration (CCNA-C), Simplilearn — Jul 2024
Generative AI for Developers (Advanced), Google Skills — In Progress
