## SUMMARY

Experienced full-stack developer with a strong background in building production-style MERN applications, real-time systems, and AI-integrated features. Skilled in bridging backend logic with pixel-perfect UIs, collaborating with designers, product managers, and other engineers to deliver impactful solutions. Seeking a role that involves balancing front-end and back-end work, owning features from database to UI, and continually learning while contributing to product direction.

## TECHNICAL SKILLS

|                         |                                                                               |
|-------------------------|-------------------------------------------------------------------------------|
| Languages:              | JavaScript (ES6+), TypeScript, C++, SQL, HTML, CSS                            |
| Frontend/Backend:       | React.js, Next.js   Node.js, Express.js, REST APIs, WebSocket                 |
| AI/LLM:                 | LangChain, RAG, AI Integration (OpenAI API)                                   |
| Databases & Infra/Auth: | MongoDB, Redis, Docker (Basics)   JWT, bcrypt, RBAC                           |
| Dev Tools & Deployment: | Git, GitHub, Vercel, Netlify, Render                                          |
| Core CS:                | Data Structures & Algorithms, OOP, DBMS, System Design, Operating Systems     |
| Autonomous Work:        | Experience working in autonomous squads, owning features from database to UI. |

## EXPERIENCE

### Freelance Full-Stack Developer

2025–Present | Self-Employed, Remote

- Designed and deployed full-stack management systems for two clients (a gym and a diagnostic center), from initial requirements through production launch.
- Built responsive, role-based web apps that digitized scheduling, client records, and daily operations, replacing manual processes.
- Owned the full development lifecycle — requirements, architecture, development, testing, and deployment — while handling client communication directly.

### Virtual Internship — Thiranex (Full-Stack Development)

- Built a Task Management Application enabling task creation, assignment, and status tracking.
- Developed an E-Commerce Web Application with product browsing, cart, and order management.
- Created a Blog Platform with Comments, including content publishing and threaded discussions.

### Software Engineering Job Simulation — Forge

- Completed a virtual job simulation performing realistic software engineering tasks for a Y Combinator–style startup application.
- Implemented frontend improvements from user feedback and shipped new backend features.
- Analyzed product/feature releases to evaluate user impact and guide development decisions.

## PROJECTS

### FlowForge — Real-Time Critical Path Orchestration Engine

[GitHub](#) | [Live Demo](#)

- Engineered a real-time CPM engine modeling projects as dependency graphs, implementing topological sort, DFS cycle detection, and CPM forward/backward-pass algorithms from scratch.
- Integrated LangChain and OpenAI API for AI-driven features: automated standup-brief generator and semantic dependency detector for hidden task relationships.
- Built a real-time layer with Socket.io/WebSocket, Express.js, Redis broadcasting graph updates within milliseconds; deployed on Render/Vercel with MongoDB Atlas.

### Banking System — Full-Stack Banking Application

[GitHub](#) | [Live Demo](#)

- Engineered a full-stack banking application (React.js frontend, RESTful Express.js/Node.js API) handling core banking operations such as accounts and transactions.
- Structured the codebase into independently deployable frontend/backend modules.
- Deployed a unified pipeline: backend on Render, frontend on Vercel.

### TrackChat — Real-Time Chat & Device Tracking App (In Progress)

MERN, Socket.io, WebSocket

- Building a real-time chat app with live device-location tracking via Socket.io, WebSocket, and HTML5 Geolocation API, rendered on an interactive Leaflet.js map.
- Architecting an event-driven Node.js/Express.js backend with MongoDB for message persistence, read receipts, typing indicators, and group chat.
- Implementing JWT refresh-token rotation with a mobile-first React.js frontend.

## EDUCATION

JIS University, Kolkata, India — B.Tech Computer Science and Engineering — Aug 2022 – May 2026

## CERTIFICATIONS

Cisco Certified Network Associate — Collaboration (CCNA-C), Simplilearn — Jul 2024  
Generative AI for Developers (Advanced), Google Skills — In Progress
